

Scrambled Eggs

The hunt is on! Try to find matching sets of eggs below. Each set has three eggs that are alike but have different names: a fraction in lowest terms, a fraction that needs to be reduced to lowest terms, and a decimal.

Color and decorate the three eggs in each set so that they match. An example has been done for you. (You will have three eggs left over!)

The image shows 30 hand-drawn eggs arranged in five rows of six. Each egg contains a fraction or a decimal. One egg (the one with $\frac{2}{10}$) has a shaded pattern. The numbers inside the eggs are:

- Row 1: $\frac{5}{8}$, $\frac{3}{24}$, $\frac{1}{4}$, 0.625, $\frac{16}{20}$, $\frac{3}{6}$
- Row 2: $\frac{14}{18}$, $\frac{1}{2}$, 0.875, 0.7, 0.125, 0.2
- Row 3: 0.8, $\frac{2}{10}$, $\frac{4}{18}$, $\frac{4}{9}$, $\frac{2}{3}$, $\frac{1}{5}$
- Row 4: $\frac{1}{2}$, 0.25, $\frac{9}{10}$, $\frac{10}{18}$, $\frac{6}{10}$, 0.5
- Row 5: $\frac{7}{10}$, $\frac{7}{8}$, $\frac{21}{30}$, 0.4, $\frac{6}{10}$, $\frac{1}{8}$

Bonus Box: On the back of this sheet, for the three eggs that did not belong to any set, write two other names for each egg.
