1. Outline/Contour Line Drawing Exercises

outline: a line that surrounds and defines the edge of a shape; does not apply line variation and shows little depth.

contour line: a line that defines the exterior and interior of a form; has line variation.

positive space: the enclosed areas or objects in an art work

negative space: the space not occupied by an object; the space circulating around object

Directions: Look at the image on the left. Try to perceive it not as a particular subject, but rather, try to copy the shapes of the negative spaces, the direction of lines and the proximity to edges. To learn to draw realistically you must train your eye to observe closely and specifically.
