

EPICENTRE®

EpiGrids™ Colony Grid Templates

Cat. Nos. EG04850, EG048100, EG0485H and EG04810H

EpiGrids™ Colony Grid Templates are easy-to-use gridding templates that allow rapid organization of colonies from initial screening plates and for preparation of precise master plates. EpiGrids Colony Grid Templates are made of flexible clear plastic and have a strip of pressure-sensitive adhesive that allows the grid to adhere to plastic Petri plates, thus ensuring correct alignment of colonies on subsequent secondary plates. Space is provided on each EpiGrids Colony Grid Template for sample or primary plate identification in subsequent replica plating experiments.

EpiGrids™ are available with 24 or 48 grid squares in packages of 50 or 100 ready-to-use templates.
