

Find an equation

line $\frac{y-1}{x-2} = \frac{3-1}{4-2}$

1. Find the gradient and use for the line

$y - 1 = 1(x - 2)$
 $y = x - 1$

$\frac{y-1}{x-2} = \frac{3-1}{4-2}$
 $\frac{y-1}{x-2} = 1$
 $y-1 = x-2$
 $y = x-1$

2. Find the

$y = x - 1$

$y = x - 1$

$y = x - 1$

$y = x - 1$

$y = x - 1$

$y = x - 1$

2. Find the gradient and use for the line

$\frac{y-1}{x-2} = \frac{3-1}{4-2}$
 $\frac{y-1}{x-2} = 1$
 $y-1 = x-2$
 $y = x-1$

3. Find the

$y = x - 1$

$y = x - 1$

$y = x - 1$

$y = x - 1$

$y = x - 1$

$y = x - 1$

3. Find the following

a) Find the equation of the line

b) Find the equation of the line

c) Find the equation of the line

d) Find the equation of the line

e) Find the equation of the line

f) Find the equation of the line

g) Find the equation of the line

h) Find the equation of the line

i) Find the equation of the line

j) Find the equation of the line
