

Name: _____

Insect Life Cycles

All animals go through a life cycle. Insects do, too. Some insects go through a complete metamorphosis...they change completely from birth to adulthood. Other insects go through an incomplete metamorphosis...the young insect looks very much like the adult.

Directions: Research the life cycle of two different insects: one that undergoes a complete metamorphosis, the other an incomplete metamorphosis. Draw each insect's life cycle and label each stage.

Complete Metamorphosis

Incomplete Metamorphosis
