Hany Ways to Measure Cross-Carricular Focus: Hathematics

There are many different ways to measure. There are many different tools to help us, too. You can use a tape measure or yardstick to measure **height**. Height is how tall someone or something is. To measure a person's height, start where his feet touch the floor. Stop at the top of his head. You can measure the height of objects the same way.

When you measure **weight**, you are measuring how heavy someone or something is. You can use a scale to measure weight. There are many kinds of scales. You may have a scale with a dial. Other scales have digital numbers. You may have one in your bathroom for weighing yourself. A scale can also be used to weigh objects. Some things are very light. A spring scale or a balance scale work better for measuring light objects:

When you measure **temperature**, you are measuring how hot or cold something is. The best tool to use for measuring temperature is a thermometer. Different kinds of thermometers help you measure temperatures, inside and outside.
