

**THE SOLAR SYSTEM**  
**COMPARATIVE AND STRUCTURAL APPROACH**

The solar system is said to be made of eight planets and a 9th one, the Earth's, plus satellites and other bodies of considerable number. The **new** system, a giant of light and heat, is visible in the night sky. It is larger than other planets. It is the largest star in the solar system. It is the largest star in the solar system. It is the largest star in the solar system.

The eight planets that orbit the sun are: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. They are arranged in order of increasing distance from the sun.

Mercury is the smallest planet in the solar system. It is the closest planet to the sun.

**The Earth**, the only planet known to support life, is the only planet in the solar system that has a large amount of liquid water on its surface. **Mars** is the only planet in the solar system that has a large amount of iron oxide on its surface. **Jupiter** is the largest planet in the solar system. It is the largest planet in the solar system. It is the largest planet in the solar system.

Mercury is the closest planet to the sun. It is the closest planet to the sun. It is the closest planet to the sun.

All the planets in the solar system, except Mercury and Venus, have satellites. The Earth has one satellite, the Moon. Other planets in the solar system have satellites. Other planets in the solar system have satellites.

**Answer**

- 1- How many planets are there in our solar system?
- 2- What are the names of the eight planets?
- 3- How old is our solar system?
- 4- Which is the largest planet?
- 5- Which planet do we live on?
- 6- Why is Saturn different from other planets?
- 7- Is the Moon a planet?
- 8- Why the Moon get light of its own?
- 9- Which is the only planet with water?
- 10- Which is the smallest planet?
- 11- Is the Sun a planet?
- 12- What is it?
- 13- What is it like?
- 14- Which is the brightest star in the solar system?
