

Adding Integers "Dot" Game

Below: Player takes turns connecting any two dots with a line. If a player's line closes a box, he or she shades in the box, adds the integer in the box to his or her score, and takes another turn. The same player keeps going until his or her line does not close a box. In the end, the player with the highest total score wins. Note: Each player must take their turn (no passing), and each player must add the integer in every box he or she closes to his or her score. Keep playing until all the boxes are shaded in. Some boxes have already been shaded in for you.

Player 1 Score (Shaded): _____

Player 2 Score (Shaded): _____
