Down

2. a unit of measure of potential energy
5. energy that creates a charge
7. a steady flow of electricity
8. opens or closes an electrical circuit
9. a device that stops a current when it is overloaded
13. a unit of measure of electrical resistance
14. a material that has no electrical conductivity
15. a connection between electricity and the earth
17. + electrical charge
18. - electrical charge

1. a device that resists the flow of electrical current
3. a place to connect appliances to an electrical system
4. a device that changes alternating current from one voltage to another
6. a substance that conducts the flow of electrical current
10. a device that provides portable electricity
11. a unit of measure of electrical current
12. provides a path for electrical current to flow
16. metal used to conduct electricity through a circuit
