

Use your multiplication facts to divide.
The answer to a division problem is the **quotient**.

Find: $2 \overline{)10}$

$2 \overline{)10}$	$\xrightarrow{\text{think}}$	$2 \times \underline{5} = 10$	$\xrightarrow{\text{write}}$	$2 \overline{)10}^5$
--------------------	------------------------------	-------------------------------	------------------------------	----------------------

Divide.

- | | <i>a</i> | <i>b</i> | <i>c</i> | <i>d</i> | <i>e</i> |
|----|--------------------|--------------------|-------------------|--------------------|--------------------|
| 1. | $2 \overline{)10}$ | $3 \overline{)6}$ | $1 \overline{)9}$ | $3 \overline{)24}$ | $2 \overline{)6}$ |
| 2. | $3 \overline{)12}$ | $1 \overline{)6}$ | $2 \overline{)4}$ | $3 \overline{)9}$ | $2 \overline{)14}$ |
| 3. | $2 \overline{)18}$ | $3 \overline{)27}$ | $1 \overline{)1}$ | $2 \overline{)16}$ | $2 \overline{)2}$ |
| 4. | $3 \overline{)15}$ | $1 \overline{)7}$ | $3 \overline{)3}$ | $1 \overline{)5}$ | $2 \overline{)12}$ |

Division can be shown two ways.	$2 \overline{)18}^9$	$18 \div 2 = \underline{9}$
---------------------------------	----------------------	-----------------------------

Divide.

- | | <i>a</i> | <i>b</i> | <i>c</i> |
|----|--|---------------------------------------|--|
| 5. | $18 \div 2 = \underline{\hspace{2cm}}$ | $9 \div 1 = \underline{\hspace{2cm}}$ | $21 \div 3 = \underline{\hspace{2cm}}$ |
| 6. | $15 \div 3 = \underline{\hspace{2cm}}$ | $6 \div 1 = \underline{\hspace{2cm}}$ | $16 \div 2 = \underline{\hspace{2cm}}$ |
