

## Dividing by larger numbers

$500 \div 15$  can be written in two ways:

$$\begin{array}{r} 500 \\ 15 \overline{)500} \end{array} \quad \text{or} \quad \begin{array}{r} 500 \div 15 \\ \hline \end{array}$$

Work out the answers to these problems. Use fractions remainders.

$$\begin{array}{r} \square \\ 40 \overline{)445} \end{array}$$

$$\begin{array}{r} \square \\ 20 \overline{)379} \end{array}$$

$$\begin{array}{r} \square \\ 50 \overline{)492} \end{array}$$

$$\begin{array}{r} \square \\ 72 \overline{)790} \end{array}$$

$$\begin{array}{r} \square \\ 50 \overline{)921} \end{array}$$

$$\begin{array}{r} \square \\ 40 \overline{)799} \end{array}$$

$$\begin{array}{r} \square \\ 10 \overline{)299} \end{array}$$

$$\begin{array}{r} \square \\ 50 \overline{)534} \end{array}$$

Work out the answers to these problems. Use *no* remainders.

$$\begin{array}{r} \square \\ 20 \overline{)415} \end{array}$$

$$\begin{array}{r} \square \\ 20 \overline{)415} \end{array}$$

$$\begin{array}{r} \square \\ 40 \overline{)952} \end{array}$$

$$\begin{array}{r} \square \\ 30 \overline{)810} \end{array}$$

$$\begin{array}{r} \square \\ 10 \overline{)79} \end{array}$$

$$\begin{array}{r} \square \\ 90 \overline{)91} \end{array}$$

$$\begin{array}{r} \square \\ 10 \overline{)342} \end{array}$$

$$\begin{array}{r} \square \\ 40 \overline{)82} \end{array}$$
