

The next puzzle we have been making is about regular and irregular shapes. Irregular shapes have sides that are of equal length and corners of the same angle. Irregular shapes will have sides that aren't the same length and have different sized angles.

Look closely at the picture. Colour the shapes to match the key. Count the sides and corners carefully. Write down how many of each shape you have found.

| | | | |
|--------------------|------------------------|------------------|------------------------|
| Shape = yellow | How many did you find? | Shape = red | How many did you find? |
| Triangle = red | | Square = blue | |
| Rectangle = orange | | Pentagon = green | |
| Hexagon = purple | | Octagon = yellow | |

Remember to colour both regular and irregular shapes.
