

Third Grade Common Core Standards Operations and Algebraic Thinking **3.OA.8**

Some problems involving the four operations, and identify and explain patterns in arithmetic. Solve two-step word problems using the four operations. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding. (This standard is limited to problems posed with whole numbers and having whole-number answers, students do not know how to perform operations in the conventional order when there are no parentheses to specify a particular order.)
