

Thermochemistry Answers - Worksheet Number One

We will ignore any heats losses to the walls of the container and losses to the air. These is a typical position to take since, in a real experiment, both would have to be accounted for, making for much more complexity.

1. $q = (20.0 \text{ g}) (20.0 \text{ }^\circ\text{C}) (2.02 \text{ J/g } ^\circ\text{C})$. (Note C_p of gas is used.)

2. $q = (15.0 \text{ g}) (25.0 \text{ }^\circ\text{C}) (2.02 \text{ J/g } ^\circ\text{C})$

3. $q = (120.0 \text{ g}) (22.0 \text{ }^\circ\text{C}) (4.184 \text{ J/g } ^\circ\text{C})$

4. $800,000 \text{ J} = (720.0 \text{ g}) (x) (2.02 \text{ J/g } ^\circ\text{C})$. (Notice the conversion to J.)

5. $q = (85.0 \text{ g}) (190.0 \text{ }^\circ\text{C}) (0.129 \text{ J/g } ^\circ\text{C})$. Divide answer by

1000 to obtain kJ.

6. $41.72 \text{ J} = (18.69 \text{ g}) (17.0 \text{ }^\circ\text{C}) (x)$

7. $(333.51 \text{ J/g}) (18.015 \text{ g/mol})$

8. $41,840 = (x) (6.5 \text{ }^\circ\text{C}) (4.184 \text{ J/g } ^\circ\text{C})$

9. Here's the graph:

The five number sections correspond to the following:

- 1) $\Delta t = 15 \text{ }^\circ\text{C}$ as a solid
- 2) melting (no temperature change)
- 3) $\Delta t = 100 \text{ }^\circ\text{C}$ as a liquid
- 4) boiling (no temperature change)
- 5) $\Delta t = 20 \text{ }^\circ\text{C}$ as a gas

The five solutions are:

- 1) $(50.0 \text{ g})(15 \text{ }^\circ\text{C}) (2.06 \text{ J/g } ^\circ\text{C})$
- 2) $(50.0 \text{ g} / 18.0 \text{ g/mol}) (6.02 \text{ kJ/mol})$
- 3) $(50.0 \text{ g}) (100 \text{ }^\circ\text{C}) (4.184 \text{ J/g } ^\circ\text{C})$
- 4) $(50.0 \text{ g} / 18.0 \text{ g/mol}) (40.7 \text{ kJ/mol})$
- 5) $(50.0 \text{ g}) (20 \text{ }^\circ\text{C}) (2.02 \text{ J/g } ^\circ\text{C})$

10. Here's the graph:
