

PROGRAM OF STUDY WORKSHEETS

The attached pages are worksheets for the Health Services Cluster.

Please note the following:

- R = Required
- Students in both the professional and skilled pathways are required to take a 4th mathematics class as a part of their 4 major courses. These students must have 4 math courses, 3 of which will be Algebra I and above.
- Skilled pathway students must have 3 more required courses for their major. The county will pick 2 of these from the courses designated in **bold for technical concentrations**. The county will designate 1 more required course from the worksheet, with preference given to those courses in bold.
- End of course exams have been developed for most courses listed as required in this document for the entry pathway student. Upon completion of these courses, students will take this test in each class, which will count no less than 15% of the students' grade.
