

Dolphins are mammals. They are not really fish. They are warm blooded (like man) and give birth to one baby (called a "calf") at a time.

At birth, a dolphin calf is about 90-130 centimeters long and will grow to 4 meters. Dolphins live up to 40 years.

The dolphin baby is born tail first, and its mother will feed the baby for up to 2 years.

However, the young dolphin will stay with its mother for 3-6 years. During this time the calf learns all about feeding, social interaction and group hunting.

1. Dolphins aren't _____. A) fish B) mammals
2. A calf is _____. A) an adult dolphin B) a baby dolphin C) a child
3. Dolphins _____ staying with other dolphins. A) like B) don't like
4. A dolphin calf stays near its mom until it is _____ years old. A) two B) 40 C) six

Democracy:

In a democracy, the people choose the leaders. To make choices people in the country need to know what the leaders in the government are doing. They have to get news that is true and not written by the government. Newspapers have to write all the news – good and bad on the country. Freedom to write is a very important part of a democracy.
