Tax and Discount Worksheet   Name:
                                                  Date:

1. **Nate buys 3 pencils for $1.50, an eraser for $1.25, a ruler for $0.75 and a notebook** for $3.00. Each item is on sale for 50% off. Nate must pay sales tax of 8%. How much does Nate pay for school supplies? SHOW ALL WORK BELOW

2. **Molly wants to buy a skirt. The original price was $29.**

PART A

The skirt is on sale for 30% off. When she goes to pay for it the cashier tells her she can have an additional 25% discount off the sale price. Not counting the sales tax, how much will Molly pay for the skirt? SHOW ALL WORK BELOW.

Answer:_____

PART B

In determining the sale price of the skirt, is there a difference between: taking off each discount separately or adding the two discounts together before taking them off the original price? Explain your answer below.

Answer:_____
