

The Respiratory System

Use the words in the box to fill in the blanks.

air	oxygen	inhale	exhale
lungs	trachea	respiratory	cough
carbon dioxide	yawn	bronchi	pharynx
hiccup	diaphragm	water vapor	nose
mouth	sneeze	blood	

All animals need that oxygen from the that into the blood where it can be transport through a system of organs called the	t we breathe. In order to ted to the rest of the b	o get the oxygen oody, the air travels			
When you, air en	, air enters the body through the				
	or the From there it passes through the				
, which forces air in					
esophagus. The air travels down the tr and then on into	achea into two branching	tubes called			
In the lungs oxygen from the air enter	s the	At the same			
time, the waste gas					
the body when you					
leaves the body when you exhale, which					
on them. The is the					
It is important to keep the respiratory into your body. If something gets in yo If something irritates it, you	ur nose and irritates it, y g gets in your trachea or	you bronchi and
