Why eating slowly is good

People who are overweight (too fat) can have a lot of health problems, from headaches to low energy. It can also be hard for them to do enough exercise. Scientists all over Europe are particularly worried about the increasing number of young people who are overweight or obese. Now, British scientists have invented a new machine which they hope will help young people to lose weight. The machine, called the Mandometer, has a small computer inside it and it can 'talk' to users. During meal times, users put their plate on the machine and it calculates the weight of the food. When they start eating, it continues to measure the weight. Then it tells them if they are eating too quickly. Nutritionists know that people who eat too fast often put on weight. Why? Normally, when the stomach is full, it sends a message to the brain to tell it to stop eating. When you eat too fast this message doesn't go to the brain correctly so you eat too much. Experts hope that this machine can help people develop better eating habits.

In a recent experiment in Britain, 106 overweight children and teenagers used the Mandometer to help them learn to eat more slowly. As a result, they ate meals that were 7% smaller and started to lose weight.

Eating more slowly isn't just good for overweight people, it's good for everyone because the body digests food better. Try these tips for eating more slowly. Put a small amount of food in your mouth each time and chew well. When you feel full, stop eating. Don't eat in front of the TV. When people watch TV while they are eating, they eat more quickly. Finally, try to sit at a table and eat as a family because when people eat alone, they eat more quickly.

A- Read the article about eating. Answer the following questions. (14 pts)

- | | |
|---|---|
| 1 If people are overweight, they | 4 When you eat too fast, |
| a may not have much energy. b usually do enough exercise. c never have headaches. | a you send a message to your brain. b you don't know when to stop eating. c your stomach never gets full. |
| 2 ... have developed a machine to help people lose weight. | 5 In an experiment in Britain, the young people |
| a Scientists all over Europe b British scientists c British and European scientists | a didn't lose any weight. b ate meals that were the same size. c learned not to eat so fast. |
