

Graphing Linear Equations

Graph each linear equation on the coordinate plane. Label the x and y axes.

1. $y = 2x + 3$

2. $y = -x + 4$

3. $y = \frac{1}{2}x - 1$

4. $y = -2x + 1$

5. Write the equation of the line passing through the points $(-2, 1)$ and $(1, 3)$.

6. Write the equation of the line passing through the points $(0, 4)$ and $(2, 0)$.

7. Write the equation of the line passing through the points $(-1, 0)$ and $(0, 2)$.
