

Name _____ Date _____

Rolling Rosters

Before beginning the competition at the Annual Energy Expo, participants must be grouped into teams according to the energy forms the participants represent. Read the team name and its description on each roster below. Then match each participant to its correct team.

 <p>Team: Mechanical Energy Movers This team's energy is the form of kinetic energy that moving objects have.</p> <p>_____</p> <p>_____</p>	 <p>Team: Thermal Energy Heat This team's energy is formed by the rapid movement of molecules, which produces heat.</p> <p>_____</p> <p>_____</p>
 <p>Team: Elastic Potential Energy Springs This is the stored energy of an object in which it is forced into a different shape but has the ability to return to its normal shape.</p> <p>_____</p> <p>_____</p>	 <p>Team: Electrical Potential Energy Batteries This is the potential energy an object has when it is in an elevated position.</p> <p>_____</p> <p>_____</p>

Participants

a lightbulb	a glowing penny	a television	heat
a flying airplane	a rock on top of a cliff	flowing water	a stretched rubber band
an extended spring toy	water behind a dam	a balloon filled with air	a ball at the top of its bounce
heat from a furnace	a rolling bicycle	a computer	

Bonus Step: Name two forms of energy not provided above. Then create a roster listing three participants for each team.
