

Number Set: 6, 4, 9, 4, 3, 4, 5

The number with the lowest value in a set of numbers.

The number 3 is the minimum value in the number set.

The number 9 is the maximum value in the number set.

The number with the greatest value in a set of numbers.

The number that appears most often in a set of numbers.

4 appears more than any other number. 4 is the mode of the number set.

Arrange the numbers in the number set from least to greatest. Find the middle number. 3 is the median.

The middle number in a sorted set of numbers.

The difference between the maximum value and minimum value in a number set.

Maximum value = 9
Minimum value = 3
 $9 - 3 = 6$
The range of this number set is 6.

Add all 7 numbers.
 $6 + 4 + 9 + 4 + 3 + 4 + 5 = 35$
Divide the sum by how many numbers are in the set.
 $35 \div 7 = 5$
The mean is 5.

The average of the numbers in a number set.
