

## Steps

1. isolate radical
2. raise power to both sides - clear radical
3. Solve and check solution - disregard extraneous solutions (these solutions produce false statements when you verify)

Example  $2\sqrt{x+1} - 3 = 15$

Step 1 
$$\begin{array}{r} 2\sqrt{x+1} - 3 = 15 \\ + 3 \quad + 3 \\ \hline 2\sqrt{x+1} = 18 \\ 2 \qquad \qquad \qquad 2 \end{array}$$

Step 2 
$$\begin{array}{l} \sqrt{x+1} = 9 \\ (\sqrt{x+1})^2 = 9^2 \\ x+1 = 81 \\ x = 80 \end{array}$$

Step 3  
 $2\sqrt{x+1} - 3 = 15$   
↑  
plug in  $x=80$

$$\begin{array}{l} 2\sqrt{80+1} - 3 = 15 \\ 2\sqrt{81} - 3 = 15 \\ 2 \cdot 9 - 3 = 15 \\ 18 - 3 = 15 \\ 15 = 15 \end{array}$$

True  $\rightarrow$

Therefore  $x=80$  is the solution
