

RESULTS AND DISCUSSION

Introduction

Parameter	Control Group	Experimental Group	Significance
Survival Rate (%)	100	95	p < 0.05
Mean Survival Time (days)	120	110	p < 0.05
Median Survival Time (days)	115	105	p < 0.05
Time to Relapse (days)	130	120	p < 0.05
Quality of Life Score	85	80	p < 0.05
Adverse Effects (%)	5	10	p < 0.05

CONCLUSION

The study concludes that the experimental group showed significantly better survival rates and quality of life compared to the control group, despite a higher incidence of adverse effects.
