| <b>1b. Prior Year 35 %</b> (from OBQI Outcome Report)  | <b>2c. Should Be Done List Date Completed:</b> 12-05-2005   |
| <b>1c. Nat'l Reference 50.2 %</b> (from OBQI Outcome Report)   | <b>2d. Process of Care Audit Date Completed:</b> 12-09-2005 |

### 3. Problem Statements:

*Identified Problem(s) (for Improvement)*  
 Clinicians aren't assessing patient's or caregiver's ability to manage medications at SOC/ROC.  
 Primary Clinicians are not assessing poly-pharmacology at SOC/ROC.

### Best Clinical Practices (prioritized):

*At SOC/ROC nurse will assess for polypharmacology and intervene with physician as assessment findings dictate. Clinician Medication Guide will provide guidance. At SOC/ROC, nurse will assess patient and caregiver's ability to manage medications using tool created-Patient/Caregiver Medication Self-Management. During each subsequent skilled visit, staff will assess compliance with medication regime and provide education based upon findings. All medications to be instructed by the nurse until verbalized as understood.*
