

Animal homes

Observations

Animals are found in many different places. Some live in gardens, some live in forests, others live in ponds, or in the ocean.

Science activity

Draw a line joining each animal to the place it lives.

A large pink area containing a matching exercise. At the top, there are four small images: a rabbit, a bee, a beehive, and a duck. Below these images is a large pink rectangle with a grid of vertical lines. At the bottom of this rectangle, there are two horizontal lines with labels: 'live' and 'where'. The labels are positioned at the start of the first and third columns of the grid, respectively. The grid is intended for drawing lines to connect each animal to its corresponding habitat.
