

$$\frac{\underline{2}}{3} \times \begin{array}{|c|} \hline \underline{2} \\ \hline \underline{2} \\ \hline \end{array} = \frac{(\underline{2} \times \underline{2})}{(3 \times \underline{2})} = \frac{4}{6}$$

... therefore  $\frac{\underline{2}}{3}$  is equivalent to  $\frac{4}{6}$
