

Day and Night

Read.

We have day and night because Earth spins. It turns in a circle, or rotates, every 24 hours. Half of Earth always faces the sun.

Look outside. Is it light out? If so, it is daytime. Your part of Earth is facing the sun. When it is dark, it is night. Your part of Earth is facing away from the sun.

Color the matching sun.

1. It is daytime for everyone at the same time.

2. Earth never moves.

3. It takes 24 hours for Earth to rotate.

4. It is daytime when it is dark.

5. When your part of Earth is facing the sun, it is daytime where you live.

Bonus Box: Write one or more sentences about Earth and the sun's light.
