

Two-Step Equations
The Do Undo Approach

Name _____
Date _____ Per. _____

1. $2w + 3 = 9$ Check: $2w + 3 = 9$

2. $5p - 8 = 22$ Check: $5p - 8 = 22$

3. $r + 15 = 20$ Check: $r + 15 = 20$

4. $4 = -6$ Check: $4 = -6$

5. $44 = 4t + 8$ Check: $44 = 4t + 8$

Directions: Continue to solve the following two-step equations by "undoing" what has been done to the variable. Remember: do the addition/subtraction step first, and then do the multiplication/division step. You need to check the even-numbered problems.
