

THE CURIOUS CASE OF THE DOG IN THE NIGHTGOWN

Dr. Watson was born in 1888 in Middlesex, England. He went to the University of London to study law, but he was not a lawyer. He became the most popular physician in London and a member of the Royal Society. The King granted him a knighthood in 1917, the highest possible compliment for someone who is not a member of the nobility. He was a very successful doctor and a very popular one. He died in 1953 at the age of 65.

Watson and Holmes are one of the most famous detective pairs in the world. They are known for their brilliant deductions and their adventures in the London streets. Holmes is a very intelligent man who is able to solve the most difficult cases. Watson is a very loyal friend and a very good doctor. They are a very successful team and their adventures are very interesting.

In a London street near the Strand, Watson was called to see a patient who was very ill. The patient was a woman who was very young and very beautiful. She was very pale and very thin. She had a very high forehead and very dark eyes. She was very nervous and very anxious. She told Watson that she had been very ill for a long time and that she had been very weak. She had been very nervous and very anxious. She had been very ill for a long time and that she had been very weak.

Watson went to see the patient and he found her very ill. She was very pale and very thin. She had a very high forehead and very dark eyes. She was very nervous and very anxious. She told Watson that she had been very ill for a long time and that she had been very weak. She had been very nervous and very anxious. She had been very ill for a long time and that she had been very weak.

(From *The Hound of the Baskervilles*)
