## Plant Vocabulary

Identify meanings of words about plants.

Write the letter of the definition next to the correct term.

|                |  |   |
|----------------|--|---|
| leaves         |  | A. Not all plants have these. This protects the seeds. When animals eat this part it helps spread the seeds.  |
| roots          |  | B. The type of air needed by plants to complete photosynthesis.   |
| stem           |  | C. This is special tissue inside the stem of the plant. It carries water and nutrients from the roots to the leaves.                                      |
| flower         |  | D. This is where the food (sugar) is made. It takes in carbon dioxide and releases oxygen.  |
| fruit          |  | E. This is special tissue inside the stem of the plant. It carries food from the leave down to the rest of the plant.                                     |
| chlorophyll    |  | F. This is the part of the plant that makes seeds.  |
| photosynthesis |  | G. This is the type of gas given off during photosynthesis.   |
| sugar          |  | H. This is the process that plants use to make food. During this process the plant turns sunlight, water and carbon dioxide into food (sugar) and oxygen. |
| oxygen         |  | I. These soak up the vitamins and minerals and store food for the plant.  |
| carbon dioxide |  | J. This green pigment is found in the leaves of the plant. It helps make food for the plant.  |
| xylem          |  | K. This is also called glucose. This is the type of food that plants make.  |
| phloem         |  | L. This supports the plant. It has many thin tubes that carry food, water and minerals throughout the plants.   |
