

**Geometry Notes - Arc Length and Areas of Sectors and Segments of Circles**

Arc length =  $\frac{m}{360} C$  where  $m$  is the measure of the central angle and  $C$  is the circumference.

Area of sector =  $\frac{m}{360} \pi r^2$  where  $m$  is the measure of the central angle and  $r$  is the radius of the circle.
