

RESEARCH AND ANALYSIS OF THE SUSTAINABLE DEVELOPMENT GOALS

The Sustainable Development Goals (SDGs) are a set of 17 global goals that aim to address the world's most pressing challenges, including poverty, inequality, climate change, and environmental degradation. These goals are designed to be universal, meaning they apply to all countries and all people. The SDGs are a key part of the 2030 Agenda for Sustainable Development, which was adopted by all member states of the United Nations in 2015. The goals are interconnected and interdependent, and they are designed to be achieved through a combination of government action, private sector investment, and civil society engagement. The SDGs are a blueprint for a better world, and they are a call to action for all of us.
