

RESEARCH AND ANALYSIS OF THE SUSTAINABLE DEVELOPMENT GOALS

The Sustainable Development Goals (SDGs) are a set of 17 global goals that aim to address the world's most pressing challenges, such as poverty, inequality, climate change, and environmental degradation. These goals are designed to be universal, meaning they apply to all countries and all people. The SDGs are organized into three pillars: economic, social, and environmental. Each pillar contains several specific goals that are interconnected and interdependent. The economic pillar focuses on promoting inclusive and sustainable economic growth, while the social pillar focuses on ensuring that all people have access to basic services and opportunities. The environmental pillar focuses on protecting the planet and promoting sustainable consumption and production patterns. The SDGs are a call to action for all countries and all people to work together to create a better world for all.
