

## Add Fractions (A)

Find equivalent fractions using the least common denominator (LCD).

Add.

Change to a mixed number if necessary.

$$\frac{6}{9} + \frac{1}{2} = \frac{12}{18} + \frac{9}{18} = \frac{21}{18} = 1 \frac{3}{18} = 1 \frac{1}{6}$$

Reduce the fraction if necessary.

LCD: 18

$$\frac{10}{12} + \frac{4}{9} =$$

$$\frac{4}{5} + \frac{1}{2} =$$

$$\frac{2}{10} + \frac{6}{11} =$$

$$\frac{2}{8} + \frac{3}{5} =$$

$$\frac{1}{5} + \frac{9}{11} =$$

$$\frac{5}{6} + \frac{6}{10} =$$

$$\frac{1}{2} + \frac{10}{12} =$$

$$\frac{5}{7} + \frac{3}{10} =$$

$$\frac{2}{10} + \frac{2}{4} =$$
