Life Cycle
Honeybees: fact or opinion?

Honeybee Happenings

Color each fact yellow.

The larva spins a cocoon around itself and becomes a pupa.

Honey tastes good.

Over the next 12 days, the pupa changes into an adult.

She lays the eggs in the cells of a honeycomb.

Honeybees are pretty.

The adult bee chews its way out of the cell.

A larva crawls out of the egg after three days.

Eggs are laid by the queen.

Nurse bees are the friendliest bees.

Honeybees are interesting.

After six days, worker bees close the larva's cell with wax.

Adult bees are mean.

Bonus Box: On the back of this page, write the facts from above in the order in which they happen.
