

Use all appropriate resources to create a table with columns showing the number of students and the number of students who are not in the program.

The table should have three columns: Number of students in the program, Number of students who are not in the program, and the total number of students. Use the information in the table to create a bar graph.

Write the number of students and the number of students who are not in the program.

Number of students in the program	Number of students who are not in the program
100	100
200	200

Write the number of students and the number of students who are not in the program. Use the information in the table to create a bar graph.

Write the number of students

- 1. Write the number of students who are not in the program in the table below.

Number of students who are not in the program
100
200

Number of students who are not in the program
100
200

- 2. Write the number of students who are not in the program in the table below.

Number of students who are not in the program
100
200

Number of students who are not in the program
100
200
