

Dinnertime for animals

Background knowledge

When animals feel hungry, they need to eat. Food provides the animals with carbohydrates, fats, and proteins, which are important nutrients they need to grow and live. Some animals have to hunt for their food while other animals eat mostly plants. Plants can make their own food using sunlight and gases from the air and water. Animals that eat plants are called herbivores. Animals that eat herbivores are called carnivores.

Science activity

Can you spot the herbivores in this group of animals? Write their names in the box.

Herbivores

Science Investigation

Find some pictures to compare the skull and teeth of carnivores and herbivores. How do they differ? Draw a picture that compares their teeth. Make paper puppets of carnivore and herbivore dinosaurs and act out a play that shows how dinosaurs eat.
