

Name _____ **answer** _____ Date _____

CELL ORGANELLES WORKSHEET

Complete the following table by writing the name of cell part and its function.

| Function | Cell Part |
|----------------------------------------------------------------------------------------|----------------------|
| Transports materials within the cell | vesicle |
| Provides temporary storage of food, enzymes and waste products | vesicle |
| Provides support for the cell | lipid bilayer |
| Organelle that manages or controls all the cell functions in a eukaryotic cell | nucleus |
| Closely stacked, flattened sacs (plants only) | chloroplast |
| Name for the collection of DNA | chromosomes |
| Packages proteins for transport out of the cell | golgi body |
| Stores material within the cell | vacuole |
| The sites of protein synthesis | ribosome |
| Produces a usable form of energy for the cell | mitochondria |
| The membrane surrounding the cell | cell membrane |
| Site where ribosomes are made | nucleous |
| Digests excess or worn-out cell parts, food particles and invading viruses or bacteria | lysosome |
