

**1) Solve by substitution**

$$6a - b = -5$$

$$4a - 3b = -8$$

**2) Solve by addition-or-multiplication**

$$2x - 3y = -3$$

$$x + y = 6$$

**3) Challenge: Solve by addition-or-multiplication**

$$\underline{k} + y = -4$$

4

$$k + \underline{y} = 6$$
