**FIGURE 2-8.** Generation of mosaicism. (a) Postzygotic nondisjunction in an initially normal conceptus. In this example, one cell line (monosomic 21) is subsequently lost, with the final karyotype 46,N/47,+21. (b) Postzygotic nondisjunction in an initially 46,XX conceptus, resulting in 45,X/46,XX/47,XXX mosaicism. (c) Postzygotic anaphase lag in an initially 47,+21 conceptus.
