Repeating Decimals >> Fractions Worksheet

To convert $0.\overline{3}$ into a fraction, follow these steps:

To convert $0.\overline{27}$ into a fraction, follow these steps:

Let n =
$$0.\overline{3}$$

10 n = $3.\overline{3}$

Let n =
$$0.\overline{27}$$

100 n = $27.\overline{27}$

So,
$$10n = 3.\overline{3}$$

$$- n = -0.\overline{3}$$

$$9n = 3$$

$$9 = 3$$

$$n = 1$$

So,
$$100n = 27.\overline{27}$$

 $\begin{array}{r} -n = -0.\overline{27} \\ \hline 99n = 27 \\ \hline 99 & 99 \\ \end{array}$
 $\begin{array}{r} n = 3 \\ \hline 11 \\ \end{array}$

For #1 - 6, convert each decimal into a fraction.

7. Some people say that $\pi = \frac{22}{7}$. Without using the values of these numbers, explain why this statement is not true.
