

Even though they both have two wheels, bicycles and motorcycles are different in several key ways. Unlike a bicycle, a motorcycle has an engine. The engine powers the motorcycle, so you don't have to pedal. Motorcycles are also more dangerous than bicycles due to their engine power and speed.

Cause/Effect

Want to take a ride on your bike? First, inspect your bike to make sure that there are no hazards like loose chains or flat tires. Then, strap on your favorite gear and slow-pedal for ultimate safety. Next, put on your helmet and tighten the chin strap. Finally – you are ready to roll!

Problem/Solution

A bicycle, also known as a bike, is a human-powered vehicle. Its two wheels are attached to a frame, one behind the other. Many kids around the world enjoy riding bikes. Popular brands include Huffy, Tru, and Schwinn.

Description

Imagine this – you are enjoying a bike ride and suddenly your bike starts wobbling. You have a flat tire. This problem is easy to solve. With an adult's help, remove the tire and insert a new tube. Inflate the tube and you are quickly hit the road again.

Compare/Contrast

Many children are injured in bicycle accidents each year because they don't wear a helmet while cruising around their neighborhoods. Not wearing a bicycle helmet is quite dangerous. If you hit your head, then you may have to visit a doctor, or even go to the emergency room.
