

Estimation

(Day #1)

Problem:

Ramiro’s father sells oil to the gas companies. They buy the oil and pay him by rounding the number of gallons of oil to the nearest hundred thousand. In 1994, Ramiro’s father sold the gas companies 136,888 gallons of oil.

- A.** Round 136,888 to the hundreds position.
- B.** The invoice was marked with an estimated number of gallons. What number was on the form, if the number of gallons sold in 1994 was rounded to the hundred thousands position?
- C.** Calculate problem ‘**B**’ and then add 7 to the hundreds position.

* A
 ** B
 *** C
