

# Triangles

Look at these different triangles.

**Equilateral**  
(all sides equal;  
is also isosceles)

**Isosceles**  
(two sides equal)

**Scalene**  
(all sides different)

**Right angle**  
(may be isosceles or  
scalene, but one angle  
must be a right angle)

List the triangles that are:

Equilateral \_\_\_\_\_

Isosceles \_\_\_\_\_

Scalene \_\_\_\_\_

Right angle \_\_\_\_\_
