

Now try your hand at balancing these equations:

- | | | | | | |
|-----|--------------------------------|---------------------------|-----|---------------------------------|-------------------------|
| 11) | $\text{Al} + \text{S} \ggg$ | Al_2S_3 | 12) | $\text{Ag} + \text{I}_2 \gggg$ | AgI |
| 13) | $\text{Zn} + \text{O}_2 \ggg$ | ZnO | 14) | $\text{Pb} + \text{O}_2 \gggg$ | PbO |
| 15) | $\text{Mg} + \text{Cl}_2 \ggg$ | MgCl_2 | 16) | $\text{Al} + \text{Br}_2 \gggg$ | AlBr_3 |
| 17) | $\text{Al} + \text{O}_2 \ggg$ | Al_2O_3 | 18) | $\text{Fe} + \text{F}_2 \gggg$ | FeF_2 |
| 19) | $\text{P} + \text{O}_2 \ggg$ | P_4O_{10} | 20) | $\text{Sn} + \text{O}_2 \gggg$ | SnO |
| 21) | $\text{Bi} + \text{Cl}_2 \ggg$ | BiCl_3 | 22) | $\text{Sb} + \text{S} \gggg$ | Sb_2S_3 |
| 23) | $\text{H}_2 + \text{N}_2 \ggg$ | NH_3 | 24) | $\text{Ca} + \text{O}_2 \gggg$ | CaO |
| 25) | $\text{Cu} + \text{O}_2 \ggg$ | Cu_2O | 26) | $\text{Ba} + \text{O}_2 \gggg$ | BaO |
| 27) | $\text{Sn} + \text{Cl}_2 \ggg$ | SnCl_4 | 28) | $\text{Mg} + \text{P} \gggg$ | Mg_3P_2 |
| 29) | $\text{Na} + \text{S} \ggg$ | Na_2S | 30) | $\text{K} + \text{N}_2 \gggg$ | K_3N |

These next are different because they have more than one product on the right hand side. The same rules still apply: there must be an equal number of each type of atom on both sides.
