

## Division with Diagrams

Name \_\_\_\_\_ Score \_\_\_\_\_

**Directions:** Draw a diagram to show how to solve each division problem. Look at the example below.

**Example**  $28 \div 7 = \underline{4}$

First, make 28 tally marks.  
Next, circle groups of 7 tally marks until there are no tally marks remaining.  
Last, count the number of groups to find the answer.

1.  $15 \div 3 = \underline{\quad}$

2.  $25 \div 5 = \underline{\quad}$

3.  $36 \div 9 = \underline{\quad}$

4.  $42 \div 7 = \underline{\quad}$

5.  $81 \div 9 = \underline{\quad}$

6.  $44 \div 4 = \underline{\quad}$
