

Graph the function $g(x) = 3^x$ and answer the questions below.

x	y
1	3
2	9
3	27
4	81

1. Is this function an example of exponential growth or exponential decay?

exponential growth

2. Are there any intercepts? If so, describe them.

only through the y-axis and it crosses at $(0, 1)$, it never passes through the x-axis

3. What happens to the value of $g(x)$ as x gets larger and larger?

it also gets larger,
