

Name _____

Water Cycle

Directions: Conduct an experiment to study the water cycle.

Materials: container, plastic wrap, and about a tablespoon of water.

Procedure: Pour the water into the container. Cover top of container with plastic wrap so it is tight. Leave the container on a shelf for a day or two.

What do you predict will occur?

What did you observe after a day or two?

What do your observations tell you?

Draw a diagram that shows how the water cycle occurs in nature.
