

Integer Song

What you are going to do: You will create a song that explains the rules for adding, subtracting, multiplying and dividing integers.

When it is due: October 22, 2009 at the start of class,

What will I give you: I will give you two class periods to work on your song with your group.

How you will turn it in: Each group will turn in two things: a small poster board and a sheet of paper with your song's lyrics.

How you will be graded: The project will be out of twenty points; five of those points will be for creativity, ten for the accuracy of the math, and the last five for neatness.

Hint: Changing the words to a song that everyone knows makes life so much easier!
